EDUCATION

•Bachelor of Engineering in Electronics and Communication Engineering

Panjab University

2020-2024

EXPERIENCE

•Internship at Outshade

June - August 2023

- Collaborated on UI design using Flutter and Figma, integrated APIs, managed state, and resolved bugs. Remote
- Gained hands-on experience with Firebase, added features to notifications

•Flutter Developer at Connect 4 Digital India

March 2024 - August(2024)

Onsite

- Developed and integrated a custom solution using the WooCommerce REST API to enhance e-commerce functionalities and used BLoC state management for a better user experience within a Flutter application.
- Integrated the STRIPE SDK as a payment gateway.
- Developed and integrated WebRTC for peer-to-peer audio and video communication, ensuring secure and reliable data transmission using ICE, STUN, and TURN servers. Handled signaling using WebSockets.
- Developed and maintained mobile apps using Flutter and Figma.
- Designed a Firebase database to simplify CRUD operations.

•Flutter Developer at Electromotion E-vidyut

August 2024 - Present

Onsite

- Developed and maintained more than seven Flutter applications independently, integrating Firebase and using Provider, BLoC and riverpod for state management.
- Designed and built the [Krishigati App](#), enabling users to track their vehicle's battery status, faults, and errors. Integrated OpenStreetMap API for polypoint tracking on Street View. Developed a full-fledged e-commerce platform for purchasing Krishigati-manufactured tractors and implemented an AI chatbot using Conversational Dialogflow.
- Built a [Aamcha chalak ride-management app for captains](#), enabling ride acceptance, navigation assistance, and earnings tracking.
- Developed a [Aamcha auto ride-booking application](#) allowing users to book rides, similar to Uber and Rapido, incorporating real-time tracking and seamless payment integration.

PERSONAL PROJECTS

•MultiUser Video Call project using WebRTC and Firebase(My personal Favourite)

Developed a dynamic MultiUser Video Call system using WebRTC with Firebase for signaling.

- Implemented an algorithm where each new user creates a peer connections for old user and generates an offer that is added to the Firebase document.
- Existing users access the new offer from Firebase, generate an answer, and establish a connection with the new peer.
- Technology Used: Flutter, Firebase, Dart.

🐙 github.com/vritravaibhav/MultiuserWebRTCvideocallFlutter

•Fullstack Instagram Clone using Flutter and Firebase

Developed a Flutter-based Instagram clone, a platform that enables users to share photos, follow, like, and comment on posts.

- Implemented user authentication and authorization using FirebaseAuth technology.
- Designed and developed the frontend interface to closely mimic Instagram's user experience.
- Utilized Firebase to efficiently store and access user data, posts, and interactions.
- Technology Used: Flutter, Firebase, Dart.

🐙 github.com/vritravaibhav/FullStackInstaClone

•Amazon App Using MongoDB and Node.js

A Flutter-based project using Express.js, Node.js, and MongoDB.

- Implemented authorization using JSON Web Token and Node.js.
- Built CRUD functionality using Express.js, Used MongoDB to store data.
- Technology Used: Node.js, Express.js, Dart, Flutter.

🐙 github.com/vritravaibhav/AmazonClone-using-node-js

TECHNICAL SKILLS AND INTERESTS

Languages/Framework: Dart, Flutter, Firebase, Java, Node.js, Dart, Dart frog

Tools: Node.js, VSCode, Git, GitHub

Cloud/Databases: MongoDB, Firebase

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming,

ACHIEVEMENTS

- Solved more than 400+ questions on CodeForces, CodeChef, GFG, and LeetCode using Java or Dart.
- Contributed to more than 30+ Apps
- [Ranked 5,466 worldwide in Codeforces Round 889 \(Div. 2\) \(Java\)](#).
